

# Grip Check Question Bank

Version: v0.1 - first draft. Expect iteration.

Internal use only

Source note: the current question source contains the option string "7-MINUTE DIRECTIONAL SCREENING". It is retained below exactly as supplied and should be reviewed in a later version.

## Scoring rules

Option points by original index: first = 3, second = 2, third = 1, fourth and later = 0.

Composite =  $\text{round}(\text{sum}(\text{points}) / (n \times 3) \times 100)$ .

Five dimensions follow product order; questions are grouped by original index bands of 4.

Dimension score =  $\text{round}(\text{sum}(\text{points in dimension}) / (\text{count} \times 3) \times 100)$ .

Labels: 80+ STRONG; 50-79 MODERATE; under 50 WEAK.

# Organization question bank

## Response to Changing Demand

**1. When a meaningful change in customer, market, regulatory, or operating demand appears, what usually happens first?**

- A. A named Decision Owner interprets and orders the demand, and a bounded group can respond within clear authority and constraints. (3 points)
- B. A clear owner assesses the change, but additional authority or structure is usually needed before action begins. (2 points)
- C. Several leaders or functions must align before action begins. (1 point)
- D. The change enters an intake, budgeting, or planning process and waits before anyone clearly owns the response. (0 points)

## Response to Changing Demand

**2. When new demand conflicts with current priorities, what usually happens?**

- A. A named owner makes an explicit tradeoff using current evidence and the expected value of the competing demands. (3 points)
- B. Leaders resolve the conflict during the next normal review. (2 points)
- C. Multiple priorities continue until capacity or deadlines force a choice. (1 point)
- D. The conflict moves through several levels or remains unresolved while work continues. (0 points)

## Response to Changing Demand

**3. When an important need crosses existing organizational boundaries, how does the organization respond?**

- A. Responsibility, authority, and the necessary capability are deliberately organized around the demand and expected result. (3 points)
- B. Existing groups coordinate through clear routes and established relationships, with limited delay. (2 points)
- C. A temporary committee, program, or meeting structure is added. (1 point)
- D. The work moves among functions until someone accepts responsibility. (0 points)

## Response to Changing Demand

**4. How clearly is new demand connected to a real need and an expected valued result before significant resources are committed?**

- A. The demand is grounded in evidence, tied to a named need, and connected to an observable result. (3 points)
- B. The need is generally understood, but important assumptions or the expected result remain incomplete. (2 points)
- C. The request becomes an initiative or deliverable before its connection to a valued result is made explicit. (1 point)
- D. Urgency, visibility, or the requester's authority drives action with little examination of the need or expected result. (0 points)

## Ownership and Bounded Execution

### 5. How much authority does the group responsible for the work have to deliver the result?

- A. It can make most necessary decisions within clear limits. (3 points)
- B. It can act locally but needs approval for several important decisions. (2 points)
- C. Authority is distributed across functions, leaders, or governance groups. (1 point)
- D. The group is responsible for delivery but has little control over the conditions affecting it. (0 points)

## Ownership and Bounded Execution

### 6. When work crosses organizational boundaries, how is the necessary coordination handled?

- A. Explicit coordination routes connect the work without absorbing decisions that can remain local. (3 points)
- B. Coordination is generally understood, but some decisions move outward unnecessarily. (2 points)
- C. Several dependencies, approvals, and working groups must be actively managed. (1 point)
- D. Even modest changes require broad organizational coordination. (0 points)

## Ownership and Bounded Execution

### 7. How fully equipped is the responsible group to complete its work?

- A. It has the skills, information, tools, and access needed to produce the result, with outside help used purposefully. (3 points)
- B. It is generally equipped, but recurring capability or access gaps create delays. (2 points)
- C. It depends on several other groups for routine parts of completion. (1 point)
- D. Key capabilities or access sit outside the group, so work frequently waits or changes hands. (0 points)

## Ownership and Bounded Execution

### 8. How quickly can leaders see whether a decision or change produced its intended effect?

- A. Soon enough to adjust before significant additional cost or work accumulates. (3 points)
- B. During the next established performance or planning review. (2 points)
- C. Only after several groups combine and report their results. (1 point)
- D. Usually after a deadline, customer reaction, or operational problem. (0 points)

## Observable and Traceable Results

### 9. When results differ from expectations, how easily can the organization examine what happened?

- A. Relevant decisions, actions, assumptions, and observed effects can be traced, allowing competing explanations to be tested. (3 points)
- B. The likely explanation can be developed through limited investigation. (2 points)
- C. Several changes and dependencies must be untangled before explanations can be tested. (1 point)
- D. Competing explanations emerge, but the evidence needed to test them is difficult to recover. (0 points)

## Observable and Traceable Results

**10. How clearly can the use of people, time, technology, and capital be connected to accountable, valued results?**

- A. Resources can be traced through bounded work to a responsible actor, an observed effect, and a valued result. (3 points)
- B. Resources can be associated with an initiative or group, but not reliably with outcomes. (2 points)
- C. Costs are visible by function, vendor, or budget category rather than by result. (1 point)
- D. Leaders know what was spent but cannot clearly determine what it produced. (0 points)

## Observable and Traceable Results

**11. When work is reported complete, how clear is what was produced and whether it met the intended need?**

- A. The result is inspectable, its finish condition is clear, and its connection to the intended need is visible. (3 points)
- B. The output is visible, but its acceptability or value becomes clear later. (2 points)
- C. Completion means planned tasks or milestones were finished, while the usable result remains uncertain. (1 point)
- D. Completion is declared through status, schedule, or budget reporting with little inspectable evidence of the result. (0 points)

## Observable and Traceable Results

**12. When an established way of working stops producing useful results, what usually happens?**

- A. The people responsible can change it within clear boundaries and test the effect. (3 points)
- B. It is reviewed and changed through an established improvement route. (2 points)
- C. An exception or leadership approval is required. (1 point)
- D. It continues because it has become standard procedure or policy. (0 points)

## Adaptation Without Loss of Control

**13. When a local change is made, how contained and predictable are its wider effects?**

- A. The affected boundary and likely consequences are understood. (3 points)
- B. Some additional coordination is needed, but the impact is manageable. (2 points)
- C. The change frequently creates unexpected work for other groups. (1 point)
- D. Small changes can produce consequences across much of the organization. (0 points)

## Adaptation Without Loss of Control

**14. When the demand that created a temporary structure or coordination mechanism changes or disappears, what usually happens?**

- A. Its continuing value is reconsidered, and it is adapted, lightened, or dissolved when no longer justified. (3 points)
- B. It is reviewed after the immediate need passes, but often remains in some form. (2 points)
- C. It becomes a recurring meeting, role, committee, or process. (1 point)
- D. It continues operating without a clear connection to the demand that originally justified it. (0 points)

## Adaptation Without Loss of Control

**15. When a change produces unintended effects, how readily can the organization recover?**

- A. The effects are detected early, contained, and reversed or corrected while the learning is captured. (3 points)
- B. The effects are manageable, but recovery requires some wider support or additional cost. (2 points)
- C. The effects spread across several groups and become expensive to correct. (1 point)
- D. The effects are difficult to trace, contain, or reverse. (0 points)

## Adaptation Without Loss of Control

**16. How meaningfully is AI being applied to operational work and decision-making?**

- A. AI performs or supports consequential work within clear boundaries, with accountable human ownership. (3 points)
- B. AI is used for important work, but its application and accountability vary across the organization. (2 points)
- C. AI is used mainly to assist individuals with analysis, preparation, or routine tasks. (1 point)
- D. AI use is experimental, fragmented, or largely disconnected from operating work. (0 points)
- E. We do not meaningfully use AI this way. (0 points)

## AI Use and Control

**17. When AI contributes to consequential work, how are its outputs evaluated before the organization relies on them?**

- A. Named accountable people inspect, challenge, and test the outputs against evidence appropriate to the consequence. (3 points)
- B. AI outputs receive routine human review, but the depth and ownership of that review vary. (2 points)
- C. Outputs receive spot checks or are reviewed mainly when something appears wrong. (1 point)
- D. Outputs are commonly accepted because they are fast, fluent, or supplied by an approved tool. (0 points)
- E. We do not meaningfully use AI this way. (0 points)

## AI Use and Control

**18. As AI makes information easier to gather, synthesize, and distribute, what has happened to decisions that once depended on managers or working groups?**

- A. Decisions have moved closer to the work where authority and consequences permit, while managers focus on judgment, stewardship, and exceptions. (3 points)
- B. Some decisions have moved closer to the work, but consequential decisions still follow existing management paths. (2 points)
- C. AI accelerates analysis and preparation, but the same working groups and approval paths still control decisions. (1 point)
- D. More information is produced, but it creates additional review, coordination, or managerial bottlenecks. (0 points)
- E. We do not meaningfully use AI this way. (0 points)

## AI Use and Control

**19. How clearly can AI use, consumption, cost, and effects be connected to accountable outcomes?**

- A. AI use is traceable through bounded work to a named owner, an observed effect, and a valued result. (3 points)
- B. AI use can be connected to groups or initiatives, but not consistently to specific outcomes. (2 points)
- C. AI costs are tracked mainly by tool, vendor, or department, with limited visibility into what they produce. (1 point)
- D. We do not meaningfully use AI this way. (0 points)
- E. 7-MINUTE DIRECTIONAL SCREENING (0 points)

## AI Use and Control

**20. When a meaningful change in demand affects your work, what usually happens first?**

- A. I can interpret the change and adjust my work within clear authority and constraints. (3 points)
- B. I can identify the needed response, but I usually need additional authority or clarification before acting. (2 points)
- C. I must align several people or groups before I can respond. (1 point)
- D. I wait for the change to move through priorities, instructions, or an intake process. (0 points)

## Response to Changing Demand

**1. When a meaningful change in customer, market, regulatory, or operating demand appears, what usually happens first?**

- A. A named Decision Owner interprets and orders the demand, and a bounded group can respond within clear authority and constraints. (3 points)
- B. A clear owner assesses the change, but additional authority or structure is usually needed before action begins. (2 points)
- C. Several leaders or functions must align before action begins. (1 point)
- D. The change enters an intake, budgeting, or planning process and waits before anyone clearly owns the response. (0 points)

## Response to Changing Demand

**2. When new demand conflicts with current priorities, what usually happens?**

- A. A named owner makes an explicit tradeoff using current evidence and the expected value of the competing demands. (3 points)
- B. Leaders resolve the conflict during the next normal review. (2 points)
- C. Multiple priorities continue until capacity or deadlines force a choice. (1 point)
- D. The conflict moves through several levels or remains unresolved while work continues. (0 points)

## Response to Changing Demand

**3. When an important need crosses existing organizational boundaries, how does the organization respond?**

- A. Responsibility, authority, and the necessary capability are deliberately organized around the demand and expected result. (3 points)
- B. Existing groups coordinate through clear routes and established relationships, with limited delay. (2 points)
- C. A temporary committee, program, or meeting structure is added. (1 point)
- D. The work moves among functions until someone accepts responsibility. (0 points)

## Response to Changing Demand

**4. How clearly is new demand connected to a real need and an expected valued result before significant resources are committed?**

- A. The demand is grounded in evidence, tied to a named need, and connected to an observable result. (3 points)
- B. The need is generally understood, but important assumptions or the expected result remain incomplete. (2 points)
- C. The request becomes an initiative or deliverable before its connection to a valued result is made explicit. (1 point)
- D. Urgency, visibility, or the requester's authority drives action with little examination of the need or expected result. (0 points)

## Ownership and Bounded Execution

### 5. How much authority does the group responsible for the work have to deliver the result?

- A. It can make most necessary decisions within clear limits. (3 points)
- B. It can act locally but needs approval for several important decisions. (2 points)
- C. Authority is distributed across functions, leaders, or governance groups. (1 point)
- D. The group is responsible for delivery but has little control over the conditions affecting it. (0 points)

## Ownership and Bounded Execution

### 6. When work crosses organizational boundaries, how is the necessary coordination handled?

- A. Explicit coordination routes connect the work without absorbing decisions that can remain local. (3 points)
- B. Coordination is generally understood, but some decisions move outward unnecessarily. (2 points)
- C. Several dependencies, approvals, and working groups must be actively managed. (1 point)
- D. Even modest changes require broad organizational coordination. (0 points)

## Ownership and Bounded Execution

### 7. How fully equipped is the responsible group to complete its work?

- A. It has the skills, information, tools, and access needed to produce the result, with outside help used purposefully. (3 points)
- B. It is generally equipped, but recurring capability or access gaps create delays. (2 points)
- C. It depends on several other groups for routine parts of completion. (1 point)
- D. Key capabilities or access sit outside the group, so work frequently waits or changes hands. (0 points)

## Ownership and Bounded Execution

### 8. How quickly can leaders see whether a decision or change produced its intended effect?

- A. Soon enough to adjust before significant additional cost or work accumulates. (3 points)
- B. During the next established performance or planning review. (2 points)
- C. Only after several groups combine and report their results. (1 point)
- D. Usually after a deadline, customer reaction, or operational problem. (0 points)

## Observable and Traceable Results

### 9. When results differ from expectations, how easily can the organization examine what happened?

- A. Relevant decisions, actions, assumptions, and observed effects can be traced, allowing competing explanations to be tested. (3 points)
- B. The likely explanation can be developed through limited investigation. (2 points)
- C. Several changes and dependencies must be untangled before explanations can be tested. (1 point)
- D. Competing explanations emerge, but the evidence needed to test them is difficult to recover. (0 points)

## Observable and Traceable Results

**10. How clearly can the use of people, time, technology, and capital be connected to accountable, valued results?**

- A. Resources can be traced through bounded work to a responsible actor, an observed effect, and a valued result. (3 points)
- B. Resources can be associated with an initiative or group, but not reliably with outcomes. (2 points)
- C. Costs are visible by function, vendor, or budget category rather than by result. (1 point)
- D. Leaders know what was spent but cannot clearly determine what it produced. (0 points)

## Observable and Traceable Results

**11. When work is reported complete, how clear is what was produced and whether it met the intended need?**

- A. The result is inspectable, its finish condition is clear, and its connection to the intended need is visible. (3 points)
- B. The output is visible, but its acceptability or value becomes clear later. (2 points)
- C. Completion means planned tasks or milestones were finished, while the usable result remains uncertain. (1 point)
- D. Completion is declared through status, schedule, or budget reporting with little inspectable evidence of the result. (0 points)

## Observable and Traceable Results

**12. When an established way of working stops producing useful results, what usually happens?**

- A. The people responsible can change it within clear boundaries and test the effect. (3 points)
- B. It is reviewed and changed through an established improvement route. (2 points)
- C. An exception or leadership approval is required. (1 point)
- D. It continues because it has become standard procedure or policy. (0 points)

## Adaptation Without Loss of Control

**13. When a local change is made, how contained and predictable are its wider effects?**

- A. The affected boundary and likely consequences are understood. (3 points)
- B. Some additional coordination is needed, but the impact is manageable. (2 points)
- C. The change frequently creates unexpected work for other groups. (1 point)
- D. Small changes can produce consequences across much of the organization. (0 points)

## Adaptation Without Loss of Control

**14. When the demand that created a temporary structure or coordination mechanism changes or disappears, what usually happens?**

- A. Its continuing value is reconsidered, and it is adapted, lightened, or dissolved when no longer justified. (3 points)
- B. It is reviewed after the immediate need passes, but often remains in some form. (2 points)
- C. It becomes a recurring meeting, role, committee, or process. (1 point)
- D. It continues operating without a clear connection to the demand that originally justified it. (0 points)

## Adaptation Without Loss of Control

**15. When a change produces unintended effects, how readily can the organization recover?**

- A. The effects are detected early, contained, and reversed or corrected while the learning is captured. (3 points)
- B. The effects are manageable, but recovery requires some wider support or additional cost. (2 points)
- C. The effects spread across several groups and become expensive to correct. (1 point)
- D. The effects are difficult to trace, contain, or reverse. (0 points)

## Adaptation Without Loss of Control

**16. How meaningfully is AI being applied to operational work and decision-making?**

- A. AI performs or supports consequential work within clear boundaries, with accountable human ownership. (3 points)
- B. AI is used for important work, but its application and accountability vary across the organization. (2 points)
- C. AI is used mainly to assist individuals with analysis, preparation, or routine tasks. (1 point)
- D. AI use is experimental, fragmented, or largely disconnected from operating work. (0 points)
- E. We do not meaningfully use AI this way. (0 points)

## AI Use and Control

**17. When AI contributes to consequential work, how are its outputs evaluated before the organization relies on them?**

- A. Named accountable people inspect, challenge, and test the outputs against evidence appropriate to the consequence. (3 points)
- B. AI outputs receive routine human review, but the depth and ownership of that review vary. (2 points)
- C. Outputs receive spot checks or are reviewed mainly when something appears wrong. (1 point)
